

3 AI Tools You'll Actually Use

A quick GuyStudio guide to practical AI for everyday work, study & life

01 CHATGPT

Best for: Images, screenshots & documents

Upload a screenshot, photo, PDF or document and ask AI to understand, summarize, extract information, explain what you see, or help you act on it. ChatGPT supports common document uploads and image inputs.

Try this:

- Upload a screenshot and ask what an error means.
- Upload a PDF and ask for a summary or key points.
- Upload a document and ask it to extract dates, tasks or important information.

02 PERPLEXITY

Best for: Research, comparisons & source-backed answers

Perplexity searches the web and returns concise answers with citations. Its research features can synthesize information from multiple sources.

Try this:

- Compare products, services or options.
- Research a topic and check the sources behind the answer.
- Ask a complex question and review the cited sources.

03 CHATGPT VOICE + FILES

Best for: Voice notes, ideas & turning information into action

Use voice conversations and uploaded files to turn rough ideas, notes or documents into structured outputs such as summaries, checklists, plans and drafts.

Try this:

- Speak an idea instead of typing everything.
- Give it notes and ask for a clean action plan.
- Upload a file and turn important points into a checklist or next steps.
